Subject: Hurricane Harvey Time Charging Question

Hi Hamilton,

We were having a couple of discussions here in the R6 REOC, and it hit us. For an employee who has a split FAN between Superfund/EPM money, under the current charging guidance, time reporting is going to become very complicated.

For example, say you have a R7 water person deployed to R6 who is a 60/40 EPM/Superfund split. All their **overtime** could be charged to the Mission assignment with the code **16/17 BR 06LOX13 303DC6 H001**, which is no problem.

For their regular time(8 hours if on straight 8's), each employee would have to do the following:

1. **Know their FAN split** (aka % of 1 FTE split between PRCs). I question how many people actually know their FAN.
2. In this example, a 60/40 split, the employee would charge 40%(32 hours in a PP) of their **REGULAR** hours to the mission assignment code **16/17 BR 06LOX13 303DC6 H001** since 40% of their FAN is Superfund.
3. For the 60% of time remaining to charge for **REGULAR** hours(48 hours), the employee would then have to further split that time down into their normal FAN with the "HVY" org codes.
 - a. 17 T 07W0HVY 303DD2 H001 40% (19.25 hours)
 - b. 16/17 B 07W0HVY 202BD4 H001 60%(28.75 hours)

Are we interpreting this correctly?
